connect to SVN server with VisualSVN Repository configurator

Repository Management Delegation is disabled

As the main step to allow repository management with Repository Configurator you are required to enable Repository Management Delegation for the repository.

If Repository Management Delegation is disabled, repository supervisor will get the following error message:

Repository management delegation is disabled for repository 'MyProject' on 'server.domain.com'. (0x80040200)

To solve the issue, you need to enable Repository Management Delegation feature for the particular repository. In order to do so, you should start VisualSVN Server Manager, rightclick the repository and execute All Tasks | Manage Delegationcontext menu command. Then check the Enable repository management delegation checkbox to enable delegation for this repository.
