Design Mode of Datawindow (freeform Datawindow)

Column A	Column B	Column C	Column D
Header↑			

After applying theme (Flat Design Blue) in Application level, the screen header showing as below.

Column A   Column B   Column C   Column D

But our expected results should be as below.

Column A   Column B   Column C   Column D

To achieve our expected results, we have modified json file - datawindow property but it got effected across the datawindow i.e. header, detail etc. in this freeform style along with across the application. That is label font color changed to white color in detail section as well which we do not want. It need remain the black color.

So to avoid this issues, instead of making changes in the json file we were forced to modify the header background color property with RGB(0.120.215) and label font color property RGB(255,255,255) in the datawindow individual object level property.

Please refer the below screen shot:

Column A	Column B	Column C	Column D	

columna.Color   X

Expression: OK

rgb(255,255,255)   ^   Cancel

This is kind of manual work to achieve this feature when we have more objects in our project and need to modify individually which will make more time effort.

So kindly suggest how to achieve the same feature by modifying the json file instead of individual objects changes.
