★★★★☆

In a [previous blog article](#) we looked at the new feature of PowerBuilder 2017 R2 for Subversion source control support. In this blog article we're going to look at a very similar feature, Git source control support. I'm not going to go through the history of source code support in PowerBuilder again, I'd refer you to that previous blog article for that. We're going to dive straight in to how the Git feature works.

Setting up Git

For this demo, we're going to use [Bonobo Git Server](#). One reason I like it is because it provide a web based admin console for managing the server, so I don't have to use the Git command line to do that.

Because it's an ASP.Net application, the machine where we're going to install it must have IIS and the .Net Framework 4.6 installed on it. To install Bonobo Git once you've downloaded it you simply need to:

The screenshot shows a web article titled "PowerBuilder 2017 R2 New Feature: Git source control support" under the "Tutorials" category. The article details include the author Bruce Armstrong, parent category Tutorials, and category PowerBuilder. It lists publication dates (09 February 2018) and a last update date (10 July 2018), with 5 hits. A rating system shows 5 stars selected, with a "Vote 5" dropdown and a "Rate" button. Below the article is a "Leave your comments" section with a rich text editor toolbar (bold, italic, underline, link, unlink, image, video, list, ordered list, code, cat, and emojis) and a text area for writing a comment. A "Submit Comment" button is at the bottom right. A checkbox for "Also subscribe me to this thread" is located at the bottom left of the comment section. A "Posting as Govinda Lopez" label is in the top right of the comment section. Three yellow arrows point from the text on the left to the rating system, the comment editor, and the subscription checkbox.
